Qualifications

NVQ Level 3 Diploma Installing
Electrotechnical Systems &
Equipment (BSE)

Level 3 Award in Initial & Periodic
Inspection & Testing of Electrical
Installations

Level 3 Award in the
Requirements for Electrical
Installations BS7671 (2018)

Advanced Level Apprenticeship
in Electrical Installation

SMSTS

First Aid at Work

Professional Summary

I am a highly motivated and professional electrical project manager who prides myself on my ability to deliver quality results from initial enquiry, to final handover.

I am incredibly passionate about the electrical industry and strive to improve my knowledge and experience through continued professional development. Through this I have achieved Engineering Technician status and look to continue my development to become an Incorporated Engineer.

I have vast experience in leading teams and individuals as both a project & line manager. I have a strong understanding of how to develop people & teams, with the belief that strong morale is the key to unlocking high efficiency.

Experience

June 2025 – Current

Electrical Project Manager • Spark Tech MEP

I am currently managing the electrical scope on the £21 million MEP package for the Leven Road East Riverside project on behalf of Taylor Wimpey. I am responsible for overseeing electrical delivery from design coordination through to client handover.

Key responsibilities:

- Manage electrical works within the overall MEP package, ensuring compliance with project specifications and BS7671.
- Coordinate with consultants, main contractors, and internal teams to ensure quality and progress.
- Plan works, manage subcontractors, and maintain alignment with the overall project programme.
- Oversee procurement, quality control, testing, and commissioning documentation.
- Lead technical problem-solving, safety compliance, and client reporting.
- Use Microsoft Project/Asta for progress tracking and programme control.

Key Skills

Strong knowledge of electrical regulations with the ability of using that knowledge to design, construct & test electrical systems

NICEIC Qualified Supervisor & Principal Duty Holder

Ability to interpretate electrical & construction drawings

Good knowledge of design software Electrical OM

Liaising with clients to build strong long-lasting relationships

Problem solving both engineering and generic problems

Experienced in forming RAMS

Reporting KPI's at director level

Engaging with people

Knowledge of working across domestic, commercial & industrial disciplines

Checking and signing off all forms of electrical certification

Completing Take off's and setting up Call off programs

Working on multiple tasks whilst balancing my time to achieve results

Full clean UK driving license

March 2024 – June 2025

Electrical Contracts Manager • UKES Rail

I joined UKES Rail as their contracts manager which was also the first senior management position within the company. I was responsible for the PPM contracts which covered the network rail asset buildings across two routes as well as several network rail managed stations such as Victoria, Guildford and Clapham. I was also responsible for looking after project work from inception to handover, overseeing reactive work, acting as NICEIC QS, carrying out site audits & snagging, creating RAMS & managing H&S incidents and reporting KPI's externally to the client as well as internally to the director.

Alongside this I also implemented key changes to the company such as the scheduling of works through CRM software, a more structured management system and a bigger focus on quality customer service.

May 2022 – March 2024

Electrical Manager • WFP Fire, Security, Electrical

I joined WFP as their electrical manager with the task of developing the electrical division which was launched in 2020. I immediately changed the focus of marketing away from EV charging installations to conducting EICR's to maximize my time in winning work which in turn led to more enquiries through repeat business.

I managed to get the electrical division moving in the right direction at the end of 2022 after six months of dealing with past problems, mainly customer complaints from work carried out under the previous manager. I always see complaints as an opportunity to gain trust and gain more work and the three biggest customers during 2023 were all from initial complaints.

During 2023 the electrical division had its best year, and I was able to hire an electrical supervisor, office administrator and apprentice while also achieving a 10% net profit. I achieved a win rate of 56% for all work quoted whilst maintaining a 42% gross profit.

In December 2023 the senior leadership team discussed ongoing issues with the business as a whole and decided there was both a lack of leadership and efficiency within the service and engineering teams that was causing profits to dip.

I offered to become the general manager and began the role immediately with my focus on fixing the immediate task issues along with building up trust with the team and offering leadership.

In my short time as general manager I organized the entire service team to undergo DISC analysis, improved efficiency between the service and engineering team and started forming KPI's to track all task-based jobs.

I managed two teams, the first was a team of 5 administrators with the second being a team of 8 engineers and formed part of the senior leadership team along with the 3 directors.

December 2019 – May 2022

Electrical Supervisor • Morgan Sindall Property Services

I joined MSPS as an electrician before becoming an electrical supervisor & NICEIC qualified supervisor for all aspects of the Basildon council housing and corporate building contract.

I was responsible for ensuring all works completed on the contract were compliant and completed to the correct standards as set out by the council. This consisted of all repairs & installations as well as the inspection & testing of occupied and void properties that formed part of the 5-year EICR testing programme.

I also line managed a team of 8 staff which consisted of engineers & apprentices as well as carrying out audits for all electrical sub-contractors on the contract.

September 2017 – December 2019

Electrician (Director) • Jayrok Electrical

When I formed my company, I remained a one-man band offering my services to various projects, usually towards the end when the need of highly skilled electricians was a requirement.

I worked on various projects with such as HS2 (Euston), WeWork (Shaftsbury Avenue), Goldman Sachs (Farringdon), Westfield Shopping Centre & Lambeth council regeneration programme.

July 2011 – September 2017

Electrical Apprentice/Electrical Supervisor • Meridian Electrical

I completed my apprenticeship at meridian and moved on to become an electrical supervisor once qualified. I gained experience in working on commercial and light industrial projects with clients such as Debenhams, Co-op, Shell & Spar.

Awards

Electrician of the year 2019
(Fix Radio)

Electrician of the year 2022
(On the Tools)

Tradesperson of the year 2022
(On the Tools)

Voluntary Work

I have previously volunteered with the IET as an EngTech assessor as well as offering advice to those seeking to gain their professional registration.

I regularly speak to students at various colleges about becoming an electrician and how the process works.

I have appeared on several electrical podcasts and was the co-creator of a podcast called EGTE (Electricians guide to everything) which is now known as the Electricians Podcast.

Finally, I was vice chairman and general secretary of a union branch called the EWB which was formed to combat the raise in unskilled workers being used as cheap labour along with sub-contractors being treated unfairly.

Interests

I enjoy rugby union and have played in the past and captained my team. I also dedicate a lot of free time to networking with those in the electrical industry to both educate and learn. Finally, I like spending time with my family, my wife and kids are the biggest part of my life, and I love spending as much time with them as much as possible.
